Ivermectin
Pour-On for Cattle

ACTIVE CONSTITUENT: IVERMECTIN 5 mg/mL

For the treatment and control of ivermectin sensitive internal and external parasites of cattle.

APVMA Approval No.: XXXXX/XXXXX

Contents: 20L;
INDICATIONS
PASTORAL AG Ivermectin Pour-On for Cattle contains ivermectin, a member of the macrocyclic lactone family of drenches. For the treatment and control of ivermectin-sensitive gastrointestinal nematodes (including inhibited immature Ostertagia ostertagi), lungworms (Dictyocaulus viviparus), earworms (Thelazia spp.), sucking and biting lice, chorionic and sarcoptic mange mites, buffalo flies (Haematobia irritans exigua) and cattle ticks (Boophilus microplus).

PRODUCT DESCRIPTION
PASTORAL AG Ivermectin Pour-On for Cattle is a ready-to-use solution of ivermectin which is a member of the avermectin family. The avermectins are potent broad-spectrum antiparasitic agents which are isolated from fermentation of the naturally occurring soil organism, Streptomyces avermitilis. Ivermectin is a member of the macrocyclic lactone class of endectocides which have a unique mode of action. Compounds of the class bind selectively and with high affinity to glutamate-gated chloride ion channels which occur in invertebrate nerve and muscle cells. This leads to an increase in the permeability of the cell membrane to chloride ions with hyperpolarisation of the nerve or muscle cell, resulting in paralysis and death of the parasite. Compounds of this class may also interact with other ligand-gated chloride channels, such as those gated by the neurotransmitter, gamma-aminobutyric acid (GABA).

The margin of safety for compounds of this class is attributable to the fact that mammals do not have glutamate-gated chloride channels, the macrocyclic ligand-gated chloride channels, such as those gated by the neurotransmitter, gamma-aminobutyric acid (GABA). PERSISTENT ACTIVITY
PASTORAL AG Ivermectin Pour-On for Cattle applied at the recommended dose of 1 mL per 10 kg bodyweight controls infections of Trichostrongylus axei (stomach hair worm) and Cooperia spp. (small intestinal worm) for up to 14 days after treatment; Ostertagia spp. (small brown stomach worm) and Oesophagostomum radiatum (nodule worm) for up to 21 days after treatment; Dictyocaulus viviparus (lungworm) for up to 28 days after treatment; Haematobia irritans exigua (buffalo fly) for up to 21 days after treatment. Resistance may develop to any drench.

For best results PASTORAL AG Ivermectin Pour-On for Cattle should be part of a total parasite control program including internal and external parasites. Consult your veterinarian for a complete parasite control program.

DOSE AND ADMINISTRATION:
PASTORAL AG Ivermectin Pour-On for Cattle is for external application to cattle only. Apply along the topline in a narrow strip extending from the withers to the tailhead.

DOSE
Dose the mob according to the heaviest animal by bodyweight in the group (cows, bulls, calves, heifers, etc.). DO NOT underdose. A representative sample of animals should be weighed with either scales or a weighband before treatment. Where there is a large variation in size within the group, draft the mob into two or more lines based on bodyweight, to avoid excessive overdosing.

Resistance may develop to any drench.

The dose rate is 1 mL for each 10 kg bodyweight. For external use only.

Gastrointestinal roundworms:
For the control of adult and immature (L1):

and adult stages of:

Cooperia sp.

C. punctata

Oesophagostomum venulosum

Trichuris spp.

Strongyloides papillosus

and immature stages of:

Nematodirus spp.

Thin Necked Intestinal Worm L1

Lungworm:

Adult and immature Dictyocaulus viviparus

Eyeworm:

Thelazia spp. – adult stages

Sucking and Biting Lice:

Linognathus vituli

Haematopinus eurysternus

Bovicola (Damalinia) bovis

Solenopotes capillatus

Mites:

Choriopotes bovis

Sarcopodes scabei var. bovis

Buffalo Flies:

Haematobia irritans exigua

Cattle tick: Boophilus microplus including organophosphate-, synthetic pyrethroid- and amidine-resistant strains. Maximum tick efficacy is achieved 4-5 days after treatment. Engorged female ticks that drop from cattle in the initial days after treatment may lay viable eggs. This should be taken into account when planning a strategic tick control program. PASTORAL AG Ivermectin Pour-On for Cattle should be alternated with conventional dips or pour-ons when the program requires repeat treatments. DO NOT retreat with PASTORAL AG Ivermectin Pour-On for Cattle in less than the meat withholding period of 42 days.

DOE: DO NOT SLAUGHTER for export less than 42 days after treatment.

</table>

Heavier animals (for example mature bulls) should receive an additional 5 mL for each 50 kg over 650 kg.

Consult your veterinarian for assistance in the diagnosis, treatment and control of parasitism.

NOT TO BE USED FOR ANY PURPOSE OR IN ANY MANNER CONTRARY TO THIS LABEL UNLESS AUTHORISED UNDER APPROPRIATE LEGISLATION.

WITHOLDING PERIODS:
MEAT: DO NOT USE less than 42 days before slaughter for human consumption.
MILK: NIL

EXPORT SLAUGHTER INTERVAL (ESI):
DO NOT SLAUGHTER for export less than 42 days after treatment.
PRECAUTIONS

Use only in well-ventilated areas or outdoors. Close container when not in use. Cattle should not be treated when hair or hide is wet since reduced efficacy may be experienced. Rain falling on cattle in less than 2 hours after dosing may result in reduced efficacy. Cloudiness may result when PASTORAL AG Ivermectin Pour-On for Cattle is stored at temperatures below 0°C. Allowing to warm at room temperature will restore the normal appearance without affecting efficacy. The antiparasitic activity of ivermectin will be impaired if the formulation is applied to areas of skin with mange scabs or lesions, or with dermatoses or adherent materials e.g., caked mud or manure. This product is for application to the skin surface only, do not give orally or parenterally. PASTORAL AG Ivermectin Pour-On for Cattle is not recommended for use in species other than cattle. Treatment should not be repeated in less than 42 days.

SAFETY TO CATTLE

Studies have demonstrated a wide safety margin in the use of ivermectin. Based on plasma levels, the topically applied formulation is expected to be at least as well tolerated by breeding animals as is the subcutaneous formulation, which has demonstrated an adequate safety margin in breeding animals.

SAFETY DIRECTIONS

Poisonous if swallowed. Will irritate the eyes and skin. Avoid contact with eyes and skin. If product on skin, immediately wash area with soap and water. If product in eyes, wash it out immediately with water. Wash hands after use.

FIRST AID

If poisoning occurs contact a doctor or Poisons Information Centre. Phone Australia 131126; New Zealand 0800 764 766.

PROTECTION OF WILDLIFE, FISH, CRUSTACEANS AND THE ENVIRONMENT

Ivermectin is extremely toxic to aquatic species. DO NOT contaminate dams, rivers, streams or other waterways with the chemical or used container.

DISPOSAL

Break, crush or puncture and bury empty containers at a local authority landfill. If not available, bury the containers below 500mm in a disposal pit specifically marked and set up for this purpose clear of waterways, vegetation and roots. Empty containers and product should not be burnt. DO NOT dispose of undiluted chemicals on site.

STORAGE

Store below 25°C (Air Conditioning). Store in carton to protect from light. Unused product should be discarded if not used within 6 months of initially opening the container.
