READ SAFETY DIRECTIONS BEFORE OPENING OR USING

TITAN
Terbutylazlazine 875 WG
Herbicide

ACTIVE CONSTITUENT: 875g/kg TERBUTHYLAZINE

GROUP C HERBICIDE

For the control of weeds in cereals (barley, oats, wheat) chickpeas, faba beans, fallows, field peas, lentils, lupins, sorghum, triazine tolerant canola as per the directions for use table.

IMPORTANT: READ THOROUGHLY BEFORE OPENING OR USING THIS PRODUCT.

APVMA Approval No.: 84781/119266
Net Contents: 10kg; 15kg; 20kg
DIRECTIONS FOR USE: ALL STATES

RESTRAINTS:
- DO NOT apply by air.
- DO NOT apply to waterlogged soil.
- DO NOT apply if heavy rains or storms that are likely to cause surface runoff are forecast within 24 hours of application.
- DO NOT use rates higher than 1.0kg/ha on soils with pH 8.0 and above as unacceptable crop damage may occur.
- DO NOT apply more than 1.2kg/ha per crop.
- DO NOT use TITAN Terbutylazine 875 WG Herbicide if the area had a triazine herbicide applied to it last growing season.

Spray Drift Restraints:
- DO NOT apply with spray droplets smaller than a COARSE spray droplet size category according to the “APVMA Compliance Instructions for Mandatory COARSE or Larger Droplet Size Categories” located under this title in the GENERAL INSTRUCTIONS section of this label.
- DO NOT apply during surface temperature inversion conditions at the application site.
- Users of this product MUST make an accurate written record of the details of each spray application within 24 hours following application and KEEP this record for a minimum of 2 years. The spray application details that must be recorded are: 1) date with start and finish times of application; 2) location address and paddock/s sprayed; 3) full name of this product; 4) amount of product used per hectare and number of hectares applied to; 5) crop/situation and weed/pest; 6) wind speed and direction during application; 7) air temperature and relative humidity during application; 8) nozzle brand, type, spray angle nozzle capacity and spray system pressure measured during application; 9) name and address of person applying this product. (Additional record details may be required by the state or territory by the state or territory where this product is used.)

MANDATORY NO-SPRAY ZONES FOR PROTECTION OF THE AQUATIC ENVIRONMENT AND NON-TARGET VEGETATION OR ANIMAL HABITAT: DO NOT apply if there are aquatic or wetland areas including aquacultural ponds within 60 metres downwind from the application area. DO NOT apply if there are non-target vegetation or animal habitat within 30 metres downwind from the application area. DO NOT apply if there are non-target vegetation or animal habitat within 40 metres downwind from the application area.

**NOT TO BE USED FOR ANY PURPOSE OR IN ANY MANNER CONTRARY TO THIS LABEL UNLESS AUTHORISED UNDER APPROPRIATE LEGISLATION.**

**WITHHOLDING PERIODS**

**Harvest:** NOT REQUIRED WHEN USED AS DIRECTED.

**Grazing**

Chickpeas, Faba beans, Field peas, Lentils, Lupins and Canola: DO NOT GRAZE OR CUT FOR STOCK FOOD FOR 6 WEEKS AFTER APPLICATION.

Sorghum: DO NOT GRAZE OR CUT FOR STOCK FOOD FOR 4 WEEKS AFTER APPLICATION.

Follows: DO NOT GRAZE OR CUT FOR STOCK FOOD FOR 6 WEEKS AFTER APPLICATION.

Cereals (wheat, barley, oats) Grazing: DO NOT GRAZE OR CUT FOR STOCK FOOD FOR 8 WEEKS AFTER APPLICATION.
GENERAL INSTRUCTIONS

- TerbymeXtreme can be used to selectively control weeds in the crops listed in the directions for use table and on fallows prior to establishing crops as directed in Fallows section below.
- When applied pre-emergence, the product is mainly absorbed via the roots. Weeds buried by cultivation may not be effectively controlled. Heavy rainfall on light soils may cause movement of the herbicide out of the weed seed zone, resulting in reduced weed control.
- DO NOT apply to recently burnt stubble/trash. After burning, rainfall or cultivation is required to allow TITAN Terbuthylazine 875 WG Herbicide to reach the soil and not be irreversibly bound by ash.
- Sufficient rainfall (20 to 30 mm either as rainfall or irrigation) to wet the soil through the weed root zone is necessary within 2 to 3 weeks of application to make the product effective. Weeds may germinate and emerge before being controlled by TITAN Terbuthylazine 875 WG Herbicide. A delay in rainfall beyond 3 weeks may result in weeds germinating from depth and surviving.
- Where soil has a high potential for leaching, heavy rainfall between application and crop emergence may result crop damage from movement of herbicide into the crop seed zone.
- In flood or furrow irrigation situations, complete and continued activation of the product may not occur due to a thin band of dry soil on the surface during or after irrigation.
- Dense weed populations and multiple germinations (especially Wild radish) may require both a pre-emergent and post-emergent herbicide treatment (only one being TITAN Terbuthylazine 875 WG Herbicide ) to give acceptable control.

INTEGRATED WEED MANAGEMENT STRATEGY FOR TT CANOLA

The use of this product in TT canola is subject to the current approved Integrated Weed Management Strategy for the use of triazine herbicides in TT canola. The Strategy encompasses: Integrated Weed Management; the specific management of crop plant volunteers and outcrossing to other plants; and triazine herbicide residue management (agronomic and environment). Compliance with registered label directions and adoption of the principles outlined in the Strategy will assist with implementation of crop management practices that minimise the development of herbicide resistance in treated weeds; reduce the levels of triazine residues in the environment; and manage practices that minimise the development of herbicide resistance in treated weeds; reduce the levels of triazine residues in the environment; and manage volunteer plants and outcrossing. Copies of the Strategy are available from TITAN AG Pty Ltd.

Where specific information and farm management assessment is required to assist with application of Integrated Weed Management programs on-farm, particularly in adapting strategies to local conditions, then specific expert advice should be obtained from an appropriate agronomist, consultant, chemical supplier or Departmental adviser.

To minimise herbicide resistance:
- Avoid dry sowing in heavily weed infested paddocks. Wait for a weed germination after the opening rains in weedy paddocks. Use a pre-plant knockdown or cultivation. No weeds should be allowed to survive at this stage.
- Avoid using TITAN Terbuthylazine 875 WG Herbicide if the area to be treated had a triazine herbicide applied to it last season.
- Watch for escapes, especially in paddocks with a long history of Group C herbicide use.
- Avoid using Group C herbicides in consecutive years.

Resistant Weeds Reporting

Growers should collect plant or seed samples where weeds that are normally susceptible to atrazine, simazine and terbuthylazine may be resistant, get them tested and seek professional advice.

MIXING

DO NOT mix or load within 20m of any well, dam, intermittent or perennial stream. Partially fill the spray tank with water and maintain agitation while adding the required quantity of TITAN Terbuthylazine 875 WG Herbicide. Agitation should continue after filling and during spraying. If spray is allowed to stand, agitation thoroughly before resuming spraying.

COMPATIBILITY

This product is compatible with TITAN Fluroxypyr Herbicide, TITAN S-metolachlor 960 Herbicide, TITAN Wetter 1000 Wetting Agent, TITAN Duelling Spray Adjuvant, TITAN Trifluralin 480 Herbicide, TITAN 625 Selective Herbicide, TITAN 300AC Herbicide, TITAN Pictoram 75-D Herbicide, TITAN Glyphosate herbicides, TITAN Paraport 250, TITAN EOS Herbicide. It is advisable that a small scale compatibility test be carried out prior to tank mixing with other products. Some reduction in control may be observed on some weeds compared to the application of knock-down herbicides alone, particularly on large weeds. It is advisable that a small scale compatibility test be carried out prior to tank mixing with other products. Read and follow all label directions, restraints, plant-back periods, withholding periods, regional use restrictions and safety directions for the tank mix products.

APPLICATION

Pre-Sowing

TITAN Terbuthylazine 875 WG Herbicide can be applied to either cultivated or un-worked soil up to 7 days prior to sowing. If cultivated, the soil should be relatively level before spraying and after sowing.

Incorporation By Sowing (IBS)

Best results are achieved when incorporated By Sowing, using minimum-tillage sowing equipment (fitted with knife points or blades less than 12mm wide and the minimum 20cm tine spacing) followed by press wheels. DO NOT use a combination of press wheels plus harrows or chains when sowing. A high level of trash (greater than 50% ground cover) may reduce weed control and hamper the sowing operation. For crop safety, maintain slow to moderate speed to avoid leaving deep furrows and avoid throwing soil into adjacent furrows. Deep furrows may also lead to reduced weed control in the crop row.

Post-Sowing Pre-Emergence (PSPE)

Apply within 2 days of sowing to soil which is relatively flat after the sowing operation. This may require trailing harrows, prickle chain or a separate rolling operation to leave the soil in an un-ridged condition after sowing and before the application.

Post-Emergence

TITAN Terbuthylazine 875 WG Herbicide can be applied to weeds growing in Triazine Tolerant canola up to 6-leaf stage and sorghum up to 5-7 leaf stage of the crop. Always add Hasten at 500mL/100L water.

Fallow Application

TITAN Terbuthylazine 875 WG Herbicide can be applied to a fallow to provide pre-emergence control of certain weeds emerging prior to sowing nominated crops below. Apply to moist soil or when rain is imminent and prior to germination of weeds. If weeds are present, cultivate or apply a knockdown-herbicide prior to applying TITAN Terbuthylazine 875 WG Herbicide. TITAN Terbuthylazine 875 WG Herbicide may also be tank-mixed with certain knock-down herbicides. See Compatibility section of the label.

FOLLOWING CROPS

TITAN Terbuthylazine 875 WG Herbicide is broken down by microbial activity, which is favoured by moist soil. Soil that is intermittently dry and moist over the plant-back period may result in longer plant-backs. Observe the following plant-back intervals between the date of application to a fallow or crop and the planting date of following crops, therefore

<table>

These plant-backs are based on average seasonal rainfall (or irrigation) and need both the months and rainfall minimums. Under dry conditions the breakdown of TITAN Terbuthylazine 875 WG Herbicide in the soil may take longer and further advice should be sought from TITAN AG Pty Ltd.

CROP SAFETY

The safety of TITAN Terbuthylazine 875 WG Herbicide to crops is due to both physically placing seed below the treated soil and to biological tolerance. A crop which is slow to germinate, emerge and grow due to frost, waterlogging, insects or disease will be less tolerant of any herbicide uptake. The following factors are most important for crop safety:
- In Pulse crops ensure the seed is covered with at least 3cm and preferably 5cm of soil.
- In Pulse crops, do not use rates higher than 0.86 kg/ha on soils with pH 8.0 and above as unacceptable crop damage may occur.
- Heavy rain after application onto ridged soil in particular may cause crop damage from TITAN Terbuthylazine 875 WG Herbicide washed into the seed.
• Avoid soils which are prone to water logging or where the furrows are likely to collapse after sowing.
• Avoid using fungicide seed treatments known to reduce seedling vigour, particularly if mixing TITAN Terbuthylazine 875 WG Herbicide with other herbicides.
• Sowing with disc seeders may lead to un-acceptable crop damage in cereals and Pulse crops.

SPRAYING
DO NOT apply when wind speed is less than 3 and greater than 20 kilometres per hour or during weather conditions when surface temperature inversions can develop. Apply by ground boom only in a minimum of 50L/ha. Use only COARSE spray quality according to ASAE S572 definition for standard nozzles.

RESISTANT WEEDS WARNING
TITAN Terbuthylazine 875 WG Herbicide is a Group C herbicide belonging to the triazinones group which is an inhibitor of photosynthesis at photosystem II. For weed resistance management TITAN Terbuthylazine 875 WG Herbicide is a Group C Herbicide. Some naturally occurring weed biotypes resistant to TITAN Terbuthylazine 875 WG Herbicide and other triazine herbicides may exist through normal genetic variability in any weed population. The resistant individuals can eventually dominate the weed population if these herbicides are used repeatedly. These resistant weeds will not be controlled by TITAN Terbuthylazine 875 WG Herbicide or any other Group C herbicides. Since the occurrence of resistant weeds is difficult to detect prior to use, TITAN AG Pty Ltd accepts no liability for any losses that may result from the failure of TITAN Terbuthylazine 875 WG Herbicide to control resistant weeds.

RE-ENTRY PERIOD
DO NOT allow entry into treated areas for 8 days. When prior entry is necessary, wear cotton overalls buttoned to the neck and wrist over normal clothing and chemical resistant gloves. Clothing must be laundered after each day’s use.

PROTECTION OF WILDLIFE, FISH, CRUSTACEANS AND ENVIRONMENT
Very toxic to aquatic life. DO NOT contaminate wetlands or watercourses with the product or used containers. After application of TITAN Terbuthylazine 875 WG Herbicide, DO NOT irrigate crop to the point of run-off, unless it can be retained on farm. DO NOT use in channels or drains.

PROTECTION OF CROPS, NATIVE AND OTHER NON-TARGET PLANTS
DO NOT apply or drain or flush equipment on or near desirable crops or plants or on areas where their roots may extend or in locations where the chemical may be washed or moved into contact with their roots. DO NOT apply on sites where surface water from heavy rain can be expected to run off to areas containing, or to be planted with susceptible crops or plants. DO NOT plant crops other than those recommended on this label for at least 6 months following the most recent application of up to 1.2 Kg per hectare.

STORAGE AND DISPOSAL
Store in the closed, original container in a dry, cool, well-ventilated area out of direct sunlight. Shake bag contents into spray tank until the bag is empty. DO NOT dispose of undiluted chemicals on site. Puncture or shred and deliver empty packaging for appropriate disposal to an approved waste management facility. If an approved waste management facility is not available, bury the empty packaging 500mm below the surface in a disposal pit specifically marked and set up for this purpose clear of waterways, desirable vegetation and tree roots, in compliance with relevant Local, State or Territory government regulations. DO NOT burn empty containers or product.
