### SPRAY DRIFT RESTRAINTS

DO NOT apply by a vertical sprayer.

Specific definitions for terms used in this section of the label can be found at [apvma.gov.au/spraydrift](http://apvma.gov.au/spraydrift)

DO NOT allow **bystanders** to come into contact with the spray cloud.

DO NOT apply in a manner that may cause an **unacceptable impact to native vegetation, agricultural crops, landscaped gardens and aquaculture production**, or cause contamination of plant or livestock commodities, outside the application site from **spray drift**. The buffer zones in the relevant buffer zone tables below provide guidance but may not be sufficient in all situations. Wherever possible, correctly use application equipment designed to reduce spray drift and apply when the wind direction is away from these sensitive areas.

DO NOT apply unless the **wind speed** is between 3 and 20 kilometres per hour at the **application site** during the time of application.

DO NOT apply if there are **hazardous surface temperature inversion** conditions present at the application site during the time of application. **Surface temperature inversion conditions** exist most evenings one to two hours before sunset and persist until one or two hours after sunrise.

### BOOM SPRAYERS

DO NOT apply by a boom sprayer unless the following requirements are met:

- Spray droplets not smaller than a VERY COARSE **spray droplet size category**.
- Minimum distances between the **application site** and downwind **sensitive areas** (see 'Mandatory downwind buffer zones' section of the following table titled 'Buffer zones for boom sprayers') are observed.

Buffer Zones for Boom Sprayers						
Application rate (/ha)	Boom Height above target canopy	Mandatory buffer zones (distances given in metres)

### AIRCRAFT

DO NOT apply by aircraft unless the following requirements are met:

- Spray droplets not smaller than a Very Coarse **spray droplet size category**.
- For maximum release height above the target canopy of 3 metres or 25% of wingspan or 25% of rotor diameter, whichever is the greatest, minimum distances between the application site and downwind sensitive areas (see 'Mandatory buffer zones' section of the following table titled 'Buffer zones for aircraft') are observed.

Sugarcane	Refer to Weed Table	QLD only	1.15-2.4L	Post-emergence.
Stubble/Fallow Spray Prior to Direct Drilling or Sowing.  Winter Cereals, Grain Legumes (Peanuts QLD only), Canola	Refer to Weed Table	ALL STATES	210-800mL	<p>Observe the plant back periods given in the table in this leaflet. Must be tank mixed with a knockdown herbicide such as TITAN Glyphosate 450 Herbicide, TITAN Paraquat 250 or TITAN EOS Herbicide. Select appropriate rate from the weed table.</p> <p>For Skeleton Weed, spraying should only be done 6-8 weeks before anticipated sowing date and subsequent cultivation limited to a minimum.</p>
Harvest Aid or Salvage Spray	Broadleaf Weeds	ALL STATES	1.7L	<p>Apply after dough stage of crop. Interval between application and effectiveness is 10-20 days. For desiccation of green matter, estimate harvest date and apply spray approximately 14 days earlier. Rain between spraying and actual harvest can negate results.</p> <p><b>Note:</b> Where thistles are tall and branching above the crop, spraying can turn the branches down into the crop, presenting more stalks to cause header comb blockages. Spraying may increase seed contamination of harvest by accelerating maturity.                      DO NOT use with undersown legumes that have not set seed.</p>
Winter Cereals	Refer to Weed Table			
Potatoes Pre-harvest Preparation	Broadleaf Weeds such as Clover, Variegated Thistle and Cruciferous weeds	VIC, TAS only	1.15-2.4L	<p>Apply approximately 4 to 5 weeks before harvest after the potato haulms have dried off. Use the highest rate where weeds are more than 30cm in height. For boom spraying apply at least 100 litres of spray mixture per hectare. If grasses such as Rye Grass and Winter Grass are also present add Amitrole* T Herbicide.</p>

#### WEED TABLE

**Note:** Where weeds are to be sprayed in a CROP or PASTURE, use only the rates given for the crop in the table below. In most cases this will give control, however some hard to kill weeds or those in advanced stages of growth may only be suppressed eg *Rumex* spp. (Dock) and *Polygonum* spp. (Wireweed, Climbing Buckwheat) are killed to ground level only.
