TITAN

ONZA

BLUE

RODENTICIDE BLOCKS

ACTIVE CONSTITUENT: 0.05g/kg DIFENACOUM

Ready to use bait for the control of Brown or Norway Rats (*Rattus norvegicus*) and Mice, including those resistant to other anticoagulants. For use in damp or dry situations, in and around buildings, including industrial, commercial, agricultural, public services and domestic structures.

CONTAINS DENATONIUM BENZOATE AS A BITTERING AGENT

APVMA Approval No.: 91556/132647

Pack Size: 100g-12kg

DIRECTIONS FOR USE

Restraints: DO NOT place blocks in locations accessible to children and domestic animals.
DO NOT place blocks in the open.

PEST	SITUATION	RATE	CRITICAL COMMENTS
Mice	For use in and around (within 2 metres) industrial, commercial, public services, domestic and agricultural buildings (machinery sheds, etc.)	Use 1 block per bait point	Explore the site and locate runs, nests, droppings and signs of damage. Eliminate as far as practical all alternative food sources. Place bait points wherever droppings, damage or other signs of rodent activity are seen. As mice are sporadic feeders use many bait points, not more than 3m apart.
Brown or Norway Rat (<i>Rattus norvegicus</i>)		Use 5 to 10 blocks per bait point	Explore the site and locate runs, burrows, droppings and signs of damage. Eliminate as far as practical all alternative food sources. Place a number of bait points in dry locations throughout the infested area, on runs, in burrows, and where droppings are seen, not more than 9m apart.

General Information and baiting strategy for rats and mice: Eliminate, as far as practicable, all other food sources. Always place bait where it is inaccessible to children, animals and birds. Protect and cover bait. When using outdoors, it is best practice to use weather resistant bait stations. It is recommended that lockable, securable, weather resistant bait stations can be used where possible. Alternatively, place bait in suitable containers or use weather resistant bait stations constructed from drainpipes or boxes. Fix, nail or wire blocks in place where appropriate. Try not to touch the bait as this deters mice and rats from eating it. DO NOT place baits where food, feed or water could become contaminated. Record the number and locations of bait stations for purpose of replacement and later removal. Inspect baits frequently, particularly in the first ten days. Replace eaten bait. If bait is completely consumed, the quantity should be increased. Continue replenishing baits until they are left untouched. Baiting for at least two weeks will be necessary to reduce rat/mouse numbers. Most deaths occur 4 to 7 days after consumption of bait, but deaths may occur for up to 2 weeks. During treatment search for and collect dead rats and mice. Following treatment remove all remains of bait and bait containers and search for and collect dead rats or mice. Burn or bury carcasses.
DO NOT place in refuse bins. DO NOT let cats, dogs and non-target animals eat poisoned rats and mice. While handling remaining bait material/animal carcasses, wear rubber gloves.

NOT TO BE USED FOR ANY PURPOSE, OR IN ANY MANNER, CONTRARY TO THIS LABEL UNLESS AUTHORISED UNDER APPROPRIATE LEGISLATION.

GENERAL INSTRUCTIONS

TITAN ONZA Blue Rodenticide Blocks is a palatable all purpose rodenticide formulation based on the advanced anticoagulant, Difenacoum, which is equally effective against rats and mice, including strains resistant to some other anticoagulants. In some circumstances more than one feed may be required to produce mortality that generally occurs 4-10 days after consuming the bait.

TITAN ONZA Blue Rodenticide Blocks is especially suited for use outdoors and in damp situations and is ideal for burrow baiting. The central hole in the block allows for fixing in bait stations, and for nailing or wiring in place to help prevent block carriage by rodents.

Indoors, TITAN ONZA Blue Rodenticide Blocks can be used in homes, factories, offices, public buildings, rural and industrial premises.

TITAN ONZA Blue Rodenticide Blocks contains denatonium benzoate (a human taste deterrent) to help prevent accidental human consumption.

PROTECTION OF LIVESTOCK, WILDLIFE, FISH, CRUSTACEANS AND ENVIRONMENT

The bait is hazardous to dogs, cats, pigs, poultry, birds and wildlife and care should be exercised in its use. DO NOT place baits in locations which are accessible to domestic animals, livestock, birds or other animals. DO NOT contaminate dams, waterways and drains with the bait or its used containers. DO NOT use this product to control native animals. The product is restricted to use in and around buildings (within 2 metres) or within enclosed spaces. In areas where possums and other non-target animals frequent, baits should be secured inside proper bait stations or bait stations constructed from drainpipes or boxes.

STORAGE AND DISPOSAL

Store in the closed, original container in a dry place out of reach of children. DO NOT store in direct sunlight. Triple rinse containers before disposal. Dispose of rinsings and unused or untaken bait in a disposal pit specifically marked and set up for this purpose clear of waterways, desirable vegetation and tree roots. If recycling replace cap and return clean containers to recycler or designated collection point. If not recycling, break, crush or puncture and bury containers in an approved waste management facility. If an approved waste management facility is not available bury the empty packaging 500mm below the surface in a disposal pit specifically marked and set up for this purpose, clear of waterways, desirable vegetation and tree roots, in compliance with relevant Local, State or Territory government regulations. Empty containers and product should not be burnt. Search for dead mice and rats, burn or bury them, do not place in refuse bins or rubbish tips. Inspect all bait stations regularly and ensure baits are removed when rodent activity has ceased. Containers that have held bait should not be used for any other purpose.

SAFETY DIRECTIONS

Poisonous if swallowed. Will irritate the skin. May irritate the eyes. Repeated minor exposure may have a cumulative poisoning effect. Avoid contact with eyes and skin. If on skin and after each baiting, wash thoroughly with soap and water. Use scoop or measure. When opening the container, and using the product, wear elbow-length rubber gloves. After each day's use, wash gloves.

FIRST AID

If poisoning occurs, contact a doctor or Poisons Information Centre. Phone Australia 131126; New Zealand 0800 764 766. Vitamin K1 (Phytomenadione) is antidotal.

NOTE TO PHYSICIANS AND VETERINARIANS: Difenacoum, the active constituent of TITAN ONZA Blue Rodenticide Blocks is a long lasting anticoagulant chemical, which if ingested by humans, domestic animals or pets, can reduce the clotting power of the blood and haemorrhage may result. Vitamin K1 (phytomenadione) should be administered urgently by medical, appropriate para-medical personnel, or veterinarians. If administered intravenously the injection must be given slowly.

SAFETY DATA SHEET

Additional information is listed in the safety data sheet (SDS). A safety data sheet for TITAN ONZA Blue Rodenticide Blocks is available from TITAN AG Pty Ltd on request. Call Customer Service on (02) 9999 6655 or visit titanag.com.au
