

TITAN GRAIN PROTECTANTS

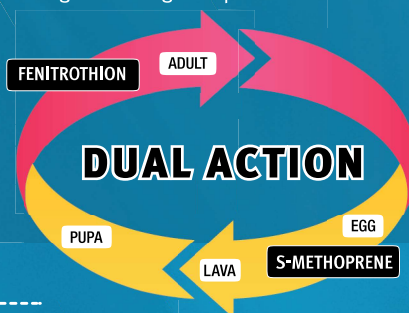

TITAN DUAL GRAIN TREATMENT

60g/L S-methoprene & 600g/L Fenitrothion

Titan Dual Grain Treatment can be used for the protection of stored cereal grains including malting barley against stored grain insect pests including grain weevils and organophosphorus resistant strains, Lesser grain borer, Rust-red flour beetle, Confused flour beetle, Saw-toothed grain beetle and Tropical warehouse moth (excluding *Sitophilus* spp.).

AT A GLANCE

- Protects stored cereal grains for up to 9 months including maize, malting barley, oats, wheat, sorghum, rice.
- Controls juvenile and adult insects.
- Can be used to re-treat grain.
- Registered for use on human and animal grains both for both local and export markets following withholding period and market MRLs.
- No withholding period when used as directed.
- Export of treated produce - details of overseas MRLs or tolerances should be obtained prior to treating cereal grain using this product.
- 500 mL product + 50 L water = 50 t of treated grain
- Available in 2.5 L and 500ml pack sizes
- Made in Australia

TRADE ADVICE

Export of Treated Produce Users should note that suitable MRL's or import tolerances may not have been established in all markets for produce treated with TITAN Dual Grain Treatment. Before treating grain for export, please check with TITAN AG for the latest information on MRL's and import tolerances.
