

# TITAN BOONTA

600 g/L glyphosate present as the potassium and monomethylamine salt

Titan Boonta Herbicide is a premium, dual-salt, non-selective, water-soluble liquid herbicide for the control of annual and perennial grasses and broadleaf weeds in a wide range of agricultural and non-agricultural use situations.

## WHAT MAKES TITAN BOONTA UNIQUE?

600 g/L Glyphosate present as potassium and monomethylamine salts, with a fully loaded, Australian developed, high-quality, unique surfactant package. The combination of these two glyphosate salts and high-quality surfactant package, allows for improved weed leaf cuticle penetration and translocation within the weed plant tissue, quick uptake into the plant and fast brownout with an improved compatibility profile.

The dual salt formulation also offers an improved compatibility profile, compared to some other high load glyphosate products.

## KEY FEATURES & BENEFITS

- ✓ High load product – less product to lift and shift
- ✓ Excellent Annual Ryegrass control compared to similar product - independent trials demonstrate
- ✓ Unique Australian developed proprietary surfactant package - ensures fast uptake of product and quick brownout of weeds
- ✓ No need for additional surfactant in most situations
- ✓ Manufactured to the highest standards
- ✓ Great compatibility profile
- ✓ Low viscosity – suitable for cold spraying conditions
- ✓ Low foaming properties and easy to pump
- ✓ Herbicide MOA Group 9 (Group M)

## AT A GLANCE

|                             |  |
|-----------------------------|--|
| <b>USE PATTERNS:</b>        | Minimum tillage, fallow, cotton – shielded sprayers, wheat and pulse crops, forestry, horticulture and commercial. |
| <b>FORMULATION:</b>         | Soluble Concentrate (SL)   |
| <b>ACTIVE INGREDIENT:</b>   | 600 g/L glyphosate present as the potassium and monomethylamine salt   |
| <b>APPLICATION RATE:</b>    | Dependant on usage situation, weed species and pressure  |
| <b>HERBICIDE MOA GROUP:</b> | Group 9 (Group M)  |

## WEED SPECTRUM

\*See product label for specific situations\*

Non-selective herbicide for the control of many annual and perennial weeds and does not provide residual weed control.

## INDEPENDANT TRIAL DATA

Senior Research Fellow - Roberto Busi based at University of WA, trialed Titan Boonta Herbicide alongside the industry standard glyphosate 600 product, in October 2024. The purpose was to assess the control and biomass reduction of four Annual Ryegrass populations treated with these high-quality glyphosate formulations.

Two populations of Ryegrass where fully susceptible to glyphosate and the other two populations were described as developing resistance to glyphosate – with a 15% survival rate to 900 grams active ingredient of glyphosate/ha.

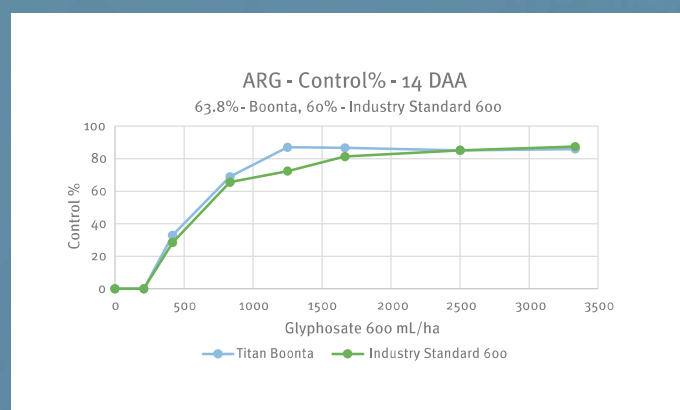

At the time of application, the Annual Ryegrass where at two leaf stage, with assessments occurring 14 days after application. This data is represented in the graphs below.

The results demonstrated that both products performed well and very similar to each other, on both assessment criteria and all four Annual Ryegrass populations.

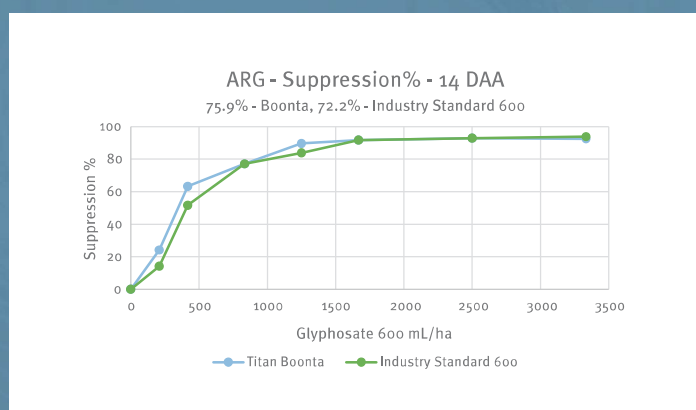

This independent trial work gives consultants, agronomists and growers confidence to use Titan Boonta Herbicide.

The graphs below are the average results of the four populations of Ryegrass sprayed in this trial.

TITAN AG TRIAL NO - TA2024H45

TITAN AG TRIAL NO - TA2024H45

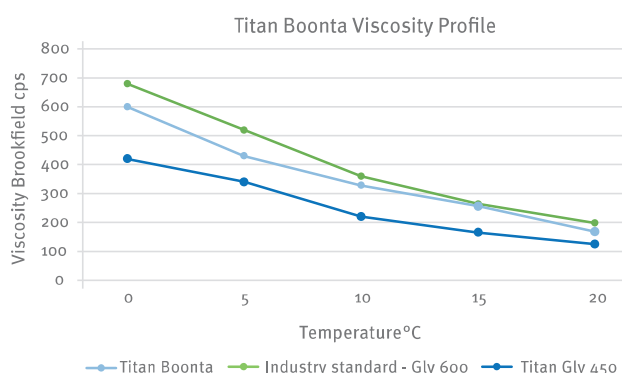

As seen in the above graphs Titan Boonta Herbicide performed very similar to the industry standard 600 product, in this independent trial.

### COLD TEMPERATURE VISCOSITY

Growers need their spraying operation to be hassle free and products that pump or pour easily out of a drum are key.

Boonta is a high load glyphosate with a full surfactant package. Having a lower viscosity, means it pours more easily than the industry standard 600 glyphosate, even in cold temperatures.

## COMPATIBILITY RECOMMENDATIONS

Titan Ag has recently conducted laboratory testing of TITAN Boonta Herbicide to establish compatibility with a range of herbicides. The tables below provide some recommendations on the suitability of tank mix combinations. Physical compatibility with TITAN Boonta Herbicide should be determined prior to mixing with a product not listed below, or when mixing TITAN Boonta Herbicide as a component of a 3-way tank mix.

|            | PARTNER PRODUCT                                  | TITAN BOONTA | WATER RATE |
|------------|--|--------------|------------|
| COMPATIBLE | Titan Besuto 850 WG 118 g                        | 1.3 L        | 50 L       |
|            | Titan Besuto 480 SC 210 mL                       | 1.3 L        | 50 L       |
|            | Boxer Gold 2.5 L                                 | 1.3 L        | 50 L       |
|            | Titan Trifluralin 480 EC 3.0 L                   | 1.3 L        | 50 L       |
|            | Titan Prosulfocarb 800 EC 3.0 L                  | 1.3 L        | 50 L       |
|            | Titan Propyzamide 800 WG 1.25 Kg                 | 1.3 L        | 80 L       |
|            | Terrador 40 g + Duelling 1.0%                    | 1.3 L        | 50 L       |
|            | Sharpen WG 34 g + Duelling 0.5 %                 | 1.3 L        | 50 L       |
|            | Titan Atrazine 900 WG 1.1 Kg                     | 1.3 L        | 50 L       |
|            | Titan Amine 720 1.2 L                            | 1.3 L        | 50 L       |
|            | Titan Ester 680 1.5 L                            | 1.3 L        | 50 L       |
|            | Titan Fluroxypyr 333 EC 300 mL                   | 1.3 L        | 50 L       |
|            | Titan Carfentrazone 400 EC 60 mL + Duelling 0.5% | 1.3 L        | 50 L       |
| CAUTION    | FMC Rustler 500 SC 1.0 L                         | 1.3 L        | 50 L       |

### Explanatory notes on recommendations as listed

**Compatible:** Products considered physically compatible with TITAN Titanium 570 in a two-way mix.

**Conditional:** Tank-mixes of TITAN Boonta with these products, needs constant agitation during the entire spray operation and should not be left in boom spray overnight.

**Not recommended – incompatible:** Tank-mixes of TITAN Boonta with these products, are likely to form a slimy residue which can block spray nozzles and filters during application.

Check the Titan website for correct mixing order information

**Please note:** This information on compatibility is understood to be correct at the time of publication, however products may vary from time to time.

Always read the product label for the manufacturer's tank mix recommendations to determine individual product compatibility options and correct mixing orders for individual products. If unsure, perform a jar test before proceeding to determine physical compatibility. Physical compatibility does not always guarantee biological compatibility.
